1. You have 10 minutes to read “EXAMINATION RULES”, “EXAM INSTRUCTIONS”, and “CALCULATOR INSTRUCTIONS” on pages 1 - 3.

2. Do NOT start answering the questions before the “START” whistle! Otherwise, you will receive a penalty.

EXAMINATION RULES

1. You are NOT allowed to bring any personal items into the examination room, except for
personal medicine or approved personal medical equipment.

2. You must sit at your designated desk.

3. Check the stationery items (pen, calculator, and rough book) provided by the organizers.

4. Do NOT start answering the questions before the “START” whistle.

5. You are NOT allowed to leave the examination room during the examination except in an emergency in which case you will be accompanied by a supervisor/volunteer/invigilator.

6. Do NOT disturb other competitors. If you need any assistance, you may raise your hand and wait for a supervisor to come.

7. Do NOT discuss the examination questions. You must stay at your desk until the end of the examination time, even if you have finished the exam.

8. At the end of the examination time you will hear the “STOP” whistle. Do NOT write anything more on the answer sheet after this stop whistle. Arrange the exam, answer sheets, and the stationary items (pen, calculator, and rough book) neatly on your desk. Do NOT leave the room before all the answer sheets have been collected.
EXAM INSTRUCTIONS

1. You are NOT allowed to bring any personal items into the examination room, except for personal medicine or approved personal medical equipment.

2. You must sit at your designated table.

3. Check the stationery items (pen, calculator, ruler, and scrap paper) provided by the organizers.

4. Do NOT start your experiments before the “START” signal.

5. You are NOT allowed to leave the examination room during the experiment, except in an emergency in which case you will be accompanied by a supervisor/volunteer/invigilator.

6. Do NOT disturb other competitors. If you need assistance, raise your hand and wait for a supervisor to come.

7. You can ONLY ask questions and discuss the experiments with your own team members.
   You must STAY at your table until the end of the time allocated for the experiments, even if you have finished the experiments or do not wish to continue.

8. At the end of the experiment time you will hear the “STOP” signal. Do NOT write anything more on the answer sheet after this stop signal. Arrange the exam, answer sheets, and the stationary items (pen, calculator, ruler, and scrap paper) neatly on your desk. Do NOT leave the room before all the answer sheets have been collected.

EXPERIMENT INSTRUCTIONS

1. After the “START” signal, you will have 15 minutes to read the experiments. In this time, it is NOT allowed to conduct the experiment yet, or answer the questions.
2. After the first 15 minutes, another whistleblow will indicate that you can start the experiment and start answering question. From this moment you have three hours to complete the test.

3. Use only the pen and pencil provided by the organizers.

4. The total number of experiments is 3. Check if you have a complete set of the exam sheets (20 pages, page 4 – page 20) and answer sheets (28 pages - including the front page). Raise your hand, if you find any sheets missing.

5. Check that your name, code and country are filled in on your answer sheets and sign every page of the answer sheets. Raise your hand, if you find any sheets missing.

6. Read the experimental procedures and questions carefully and write your answers in the corresponding boxes of the answer sheets.

7. When units are provided in the answer sheets, you have to write the answers correctly for the units.

8. Always show your calculations if room for this is provided. If you do not show your calculations, no points are awarded for the question.

9. You should write your final answers down in the appropriate number of digits.

10. You MUST wear a Lab Coat and Safety Glasses during the experiments.

INSTRUCTIONS FOR CALCULATOR

1. Turning on: Press ON/C.

2. Turning off: Press 2ndF ON/C.

3. Clearing data: Press ON/C.

4. Addition, subtraction, multiplication, and division

   Example 1) \( 45 + \frac{285}{3} \)

   \[
   \begin{array}{c}
   \text{ON/C} \\
   45 \text{ } + \text{ } 285 \text{ } ÷ \text{ } 3 = \text{ } 140.
   \end{array}
   \]
Example 2) \( \frac{18+6}{15-8} \)

\[
\begin{array}{c}
\text{ON/C} \quad 18 \quad + \quad 6 \quad \div \quad 15 \quad - \quad 8 \quad = \\
3.428571429
\end{array}
\]

Example 3) \( 42 \times (-5) + 120 \)

\[
\begin{array}{c}
\text{ON/C} \quad 42 \quad \times \quad 5 \quad +/- \quad + \quad 120 \quad =
\quad -90.
\end{array}
\]

\[
\begin{array}{c}
\text{ON/C} \quad 42 \quad \times \quad ( \quad - \quad 5 \quad ) \quad + \quad 120 \quad =
\quad -90.
\end{array}
\]

5. Exponential

Example 1) \( 8.6^{-2} \)

\[
\begin{array}{c}
\text{ON/C} \quad 8.6 \quad \div \quad 2 \quad =
\quad 0.013520822
\end{array}
\]

Example 2) \( 6.1 \times 10^{23} \)

\[
\begin{array}{c}
\text{ON/C} \quad 6.1 \quad \times \quad 10 \quad \div \quad 23 \quad =
\quad 6.1 \times 10^{23}
\end{array}
\]

6. To delete a number/function, move the cursor to the number/function you wish to delete, then press \( \text{DEL} \). If the cursor is located at the right end of a number/function, the \( \text{DEL} \) key will function as a back space key.

Do NOT turn to next page
Before the “START” whistle is blown.
Otherwise, you will receive a penalty.
BIOLOGY

Biology Practical [13.4 points]

Q1. [7.15 points] Draw a sketch of the spots observed on your TLC plate, and complete the table in your answer sheet with Rf values and proposed pigments (Roman numeral from Table 1, one per spot):

[1.75 points – awarded in a deductive manner – loss of points for omissions] Each lane corresponds to the original – check photograph for comparison and check if any obvious spots are omitted.

[1.9 points (0.1 x 19)] for the drawing. Minimum 7 for lane A (& 1 weak), min. 5 for B, min. 6 for lane C (& some weak), max. 1 for lane D (lose points for additional spots – carry over)

[2.0 points, 0.25 per Rf (0.25x8)] Points for the calculation of Rf.(margin of error? Invigilators will prepare and run plate in their rooms and take photo for comparison and to decide Rf for grading)

[1.5 points, 0.25 per pigment (0.25x6)] Suggested pigments – minimum of six correct. If the same pigment is present in A,B,C but not identified in one, deduct one third of marks (0.08), if present in two lanes and only identified once, deduct 50% of marks (i.e. 0.125)

<table>
<thead>
<tr>
<th>Spot no. (e.g. A1)</th>

</table>

Q5. Write the letter that corresponds to the pigment that moves slowest up the TLC plate in the box on your answer sheet. [0.25 points]

A. Chlorophyl $a$
B. Xanthophyll 1
C. Pheophytin
D. Chlorophyl $b$

Q6 [1.0 points, 0.25 per statement] For the following statements, mark in your answer sheet whether the statements are correct or incorrect.

A compound moves slower than others up a TLC plate in our experimental conditions because...

<table>
<thead>
<tr>
<th>Statement</th>
<th>Correct</th>
<th>Incorrect</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is less polar than the other compounds</td>
<td>X</td>
<td></td>
</tr>
<tr>
<td>It is a more hydrophilic compound</td>
<td></td>
<td>X</td>
</tr>
<tr>
<td>It has a larger molecular weight</td>
<td></td>
<td>X</td>
</tr>
<tr>
<td>It is more concentrated than the other compounds</td>
<td></td>
<td>X</td>
</tr>
</tbody>
</table>

Q7. Will the $R_f$ values change if the ratio of polar and non-polar solvents in the mobile phase is changed? Write the letter that corresponds to your answer in the box on your answer sheet. [0.25 points]

A. Yes
B. No
Q8. What could potentially limit the effectiveness of the chromatographic technique you have used? [1.0 points, 0.25 per statement]

<table>
<thead>
<tr>

</tbody>
</table>

<table>
<thead>
<tr>
<th>Question (Points)</th>
<th>Determine the mass (g) of acid in the fruit acid solution titrated with NaOH solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>II-5 [1.0 points]</td>
<td>Mole ratio of NaOH : HA is 1:1 [0.25]</td>
</tr>
<tr>
<td></td>
<td>HA moles = 2.565 x 10^{−3} mol [0.25]</td>
</tr>
<tr>
<td></td>
<td>MW of HA = 60.0 g/mol</td>
</tr>
<tr>
<td></td>
<td>Mass of HA = 2.565x10^{−3} x 60.0 g/mol [0.25]</td>
</tr>
<tr>
<td></td>
<td>= 1.539 x 10^{−1} g or 0.1539 g [0.25]</td>
</tr>
<tr>
<td>Question (Points)</td>
<td>Assumption: the density of fruit acid solution is 1.005 g/mL, determine the mass (g) of 4 mL solution.</td>
</tr>
<tr>
<td>------------------------</td>
<td>-----------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| **II-6** [0.5 points]  | Mass = density \( \times \) volume \[
1.005 \text{ g/mL} \times 4.0 \text{ mL} [0.25]  
4.02 \text{ g} [0.25] 
\]

<table>
<thead>
<tr>
<th>Question (Points)</th>
<th>Determine the % mass of the acid in fruit acid solution.</th>
</tr>
</thead>
</table>
| **II-7** [0.5 points]  | \[
= \frac{0.1539 \text{ g}}{4.02 \text{ g}} \times 100\% [0.25]  
= 3.83 \% [0.25] 
\]

<table>
<thead>
<tr>
<th>Question (Points)</th>
<th>Calculate the volume of the fruit acid solution that the student used?</th>
</tr>
</thead>
</table>
| **II-8** [1.0 points]  | Mole of \( \text{NaOH} \) = 0.54 \text{ mol/L} \times 25 \times 10^{-3} \text{ L} 
\[
= 0.0135 \text{ mol} [0.25] 
\]

   Moles ratio is 1:1, therefore HA mol is 0.0135 mol. [0.25]

Concentration of fruit acid solution = moles/volume = 2.565 x
1.35 \times 10^{-3} \text{mol} / 25.65 \times 4 \times 10^{-3} \text{L} = 0.641 \text{ mol/L}

Volume of fruit acid solution required = moles/conc
= 0.0135 \text{ mol} / 0.641 \text{ mol/L}
= 0.021 \text{ L}
= 21 \text{ mL} \quad [0.5]

OR Volume of fruit acid solution = 25 \text{ mL} \times 0.54 \text{ mol/L} / 0.641 = 21.09 \text{ mL} \quad [0.5]

Question (Points)

Another student has measured the pH of the fruit acid solution to be 2.75. Use this value and your data to determine the pK\(_a\) of the fruit acid solution.

\(\text{II-9} \quad [0.5 \text{ points}]\)

\[\text{pK}_a = \text{Sq of pH} = ????????\]

Title: Determination of the coefficient of viscosity of oil

Introduction

While water can be poured from one container to another easily, honey takes a very long time to flow out of its container. The reason for these different rates of flow is that honey is more viscous and resists flow more than water does. The coefficient of viscosity is a measure of the degree of internal resistance to flow and shear. Coefficient of viscosity is an important parameter in food industry. Flow of various components of the raw materials to the final product in an automated food industry will depend on this. The viscosity can be determined by measuring the velocity of a falling sphere through a column of fluid of unknown viscosity. This is accomplished by dropping a sphere through a measured distance in a column of fluid and measuring how long it takes to travel the distance.

Materials

- Thermometer
- Balls of 4 different diameters
- Cylindrical vertical tube filled with oil
- Stopwatch
- Meter ruler
- Tape to mark
- Paper towel
- Magnet
Theoretical aspects
Consider a spherical ball bearing of radius \( r \) and density \( \rho_s \) falling through a column of fluid of coefficient of viscosity \( \eta \) and density \( \rho_f \) as illustrated figure 1 below.

\[ \text{Figure 1: Showing a spherical ball of radius } r \text{ falling through a column of fluid of density } \rho_f. \]
\[ \text{A and B marks the distance travelled by the sphere at terminal velocity } v_t. \]

Initially the ball has some downward acceleration \( a \) until the ball acquires a constant velocity, called terminal velocity \( v_t \). According to Newton’s second law:

\[ \text{Net Force} = ma \]
\[ ma = W - (F_u + F_v) \] \hspace{1cm} (1)

Where:

\( m \) is the mass of the ball.

\( W = mg \) is the weight of the ball.
\[ F_u = \frac{4}{3} \pi r^3 \rho_f g \] is the buoyant force = weight of the fluid displaced (Archimedes law)

\[ F_v = 6\pi \eta r v \] is the viscous force (of a sphere of radius \( r \)) proportional to the velocity \( v \) of the ball (Stokes' Law).

Secondly when the ball attains terminal velocity before point A, there is no more acceleration and hence the net force is zero. Note that \( l \) is the distance between A and B and \( t \) is the time the ball takes to fall between A and B.

**Procedure**

[1.3]

1. Measure the temperature \( T_b \) of the oil before starting the experiment and write it in the box on the answer sheet.
2. Use the tape to mark two horizontal lines (A and B) on the cylindrical tube so that line A is 70 cm from the surface of the fluid. Line B should be approximately 50 cm below point A.
3. Measure the vertical distance \( l \) between points A and B, and write it in the box on the answer sheet provided.
4. Devise a method to measure the average diameter of the balls using the ruler scale as accurately as possible. Describe your method using only a sketch in the space provided.
5. Use your method to measure the average diameter of each of the four different sizes of balls and write these values in Table III-1 on the answer sheet.
6. Release one of the balls carefully into the fluid at the center of the surface (ensuring that the ball is not near the wall of the cylinder during its motion between A and B).
7. Measure the time \( t \) taken by the ball to travel the distance \( l \) between A and B and record it in the provided table.
8. Repeat steps 6 and 7 above using other balls of the same diameter to have three values of time (the magnet can be used to pull the balls along the cylinder wall out of the oil, ask for help if necessary).
9. Repeat steps 6 to 8 for the other 3 sizes of balls.
10. Measure the temperature \( T_a \) of the oil just after finishing the experiment and write it in the box on the answer sheet.

**Note the following constants:**

Density of the fluid \( \rho_f = 871.4 \text{ kg/m}^3 \)
Density of the ball \( \rho_s = 7717 \text{ kg/m}^3 \)
Acceleration due to gravity \( g = 9.81 \text{ m/s}^2 \)
DO NOT PROVIDE YOUR FINAL ANSWERS HERE USE THE ANSWER BOOKLET

Results and analysis

III-1 Calculate the average time, \( d^2 \) and \( v_t \) for each set of ball bearings, and complete Table III-1 on the answer sheet.

[5.0]

III-2 Plot a graph of \( v_t \) (y-axis) versus \( d^2 \) (x-axis) and draw a straight line of best fit on the grid on the answer sheet.

[3.0]

III-3 Determine the slope of the graph. Indicate the points that are used on the graph for calculating the slope. Give your answer with appropriate units.

[1.5]

III-4 The following formula for the terminal velocity \( v_t \) can be derived from equation (1):

\[
v_t = C \cdot \frac{d^2}{\eta}
\]

(2)

Where \( C = 3731 \) kg m\(^{-2}\)s\(^{-2}\). Write down in the space provided the analytical expression for \( C \) in terms of \( g \), \( \rho_s \) and \( \rho_f \).

[1.0]
III-5 Use the value of the slope to determine the coefficient of viscosity $\eta$ of the oil with the appropriate units. [1.5]
